**Book: Color Vision in the Occupational Setting**

The purpose of this “cookbook” on color vision is to provide a current, updated manual on the field of color vision from the occupational medicine and environmental medicine point of view. The book reviews the color vision tests utilized currently and how the examination is performed with its diagnostic significance. A major text by Jennifer Birch 1993 is now out of print which contains most useful source of this information. These sections have been utilized in order to maintain this very important information for the less specialized personnel. There are many good reference sources for the ophthalmologist, optometrist and visual researchist but none available to the primary care physicians and nurses who usually did not received good training in their basic technical education. This book serves as a working manual for the Occupational M.D. and other professionals involved in Occupational Medicine. 84 Pages with over 24 color photos and illustrations.

**US $ 75.00**
